

Sales Performance Dashboard – Portfolio Walkthrough

Project Overview

Built an interactive Power BI dashboard to analyze ecommerce sales performance across time, products, categories, and regions. The goal was to enable stakeholders to quickly track revenue trends, order behavior, and regional performance while supporting data-driven decisions.

Dataset

Source: Ecommerce sales CSV

Key fields: OrderID, Date, Product, Category, Revenue, Customer Location (Region).

Data Preparation

- Cleaned and standardized region values
- Removed duplicate orders
- Created month and year attributes for time-based analysis
- Built a dedicated Date table for accurate time intelligence

KPIs & Metrics

- Total Revenue
- Total Orders
- Average Order Value (AOV)
- Month-over-Month Revenue Growth (%)

Dashboard Features

- KPI cards for high-level performance tracking
- Revenue trend line chart by month
- Top products by revenue bar chart
- Regional revenue comparison
- Interactive slicers for date, category, and region

Key Insights

- Electronics generate the highest share of revenue
- Revenue shows consistent month-over-month growth with seasonal spikes
- USA and India are the strongest performing regions
- Some categories show lower AOV but higher order volume

Business Recommendations

- Focus inventory and marketing spend on top-performing products
- Expand targeted campaigns in high-growth regions
- Use bundling strategies to increase AOV in lower-value categories

Tools & Skills Demonstrated

Power BI, DAX, data modeling, KPI design, dashboard UX, business storytelling
